The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

The invention relates to isolated nucleic acids encoding plant stress response proteins (including peptide-methionine sulphoxide reductases) appearing as ABU58148. ABU58246 (or a protein 80% identical to them) from Zea mays, Oryza sativa, Glycine max, or Triticum aestivum. Also included are expression cassettes, transformed host cells, transformed host cells, transformed host cells, transganic plants/seeds, modulating the level of peptide-methionine sulphoxide reductase in a plant and a computer system/data processing system for identifying, analysing, or modelling a genetic sequence. The plant nucleic acid is useful in developing strategies to improve plant response to stress (e.g. drought, heat, radiation or pathogen attack), engineering plants with increased disease and stress resistance, manipulating DNA repair and recombination efficiency, manipulating intracellular protein transport, and improvingly protecting grain flavour. The nucleic acids may also be used as probes or amplification primers in the detection, quantitation or isolation of enamenogens in preparing or screening antibachies, and in sense or immunogens in the proteins may be not more genes in a host cell, tissue or plant. The proteins may be simmunogens or antigens to obtain antibachies, and in sense or plant. The proteins may be used as immunogens or antigens to obtain antibachies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21;

The proteins may be used as immunogens or antiyens to contain antibodies specifically immunoreactive with the protein, and in assays for enzyme agonists or antagonists. The present sequence is a plant stress response protein (or fragment).

The invention relates to isolated nucleic acids encoding plant stress response proteins (including peptide-methiomine sulphoxide reductases) appearing as ABUS8148-ABUS8246 (or a protein 80% identical to them) from Zea mays, Oryza saltiva, Glycine max, or Triticum aestivum. Also included are expression casettes, transformed host cells, transgenic plants/seeds, modulating the level of peptide-methionine sulphoxide reductase in a plant and a computer system/data processing system for identifying, analysing, or modelling a genetic sequence. The plant modelec acid is useful in developing strategies to improve plant response to stress (e.g. drought, heat, radiation or pathogen attack); engineering plants with increased disease and stress resistance, manipulating DNA repair and recombination efficiency, manipulating DNA repair and recombination efficiency. The nucleic acids may also be used as probes or amplification primers in the detection, quantitation or isolation of gene transcripts, for recombinant expression of encoded polypeptions of immunogens in preparing or screening antibodies, and in sense or immunogens in a host for it the contraction of immunogens in a host for it that it issue or immunogens in a host for it that it issue or immunogens in a host for it that it issue or immunogens in a host for it that it issue or immunogens in a host for it that it issue or immunogens in a host for it that it issue or immunogens in a more contraction of income in immunogens in a more contraction of immunogens in a more contraction immunogens in a more contraction of immunogens in a more contraction of immunogens in a more contraction immunogens in a more genes in a more genes in a more contraction of immunogens in a more contraction immunogens in a more contraction immunogens in a more genes in a mor
                          New peptide-methionine sulfoxide reductase and nucleic acids, useful in improving plant response to stress, engineering plants with increased disease and stress resistance, or and improving/protecting grain flavor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   plant. The proteins may be used as immunogens or antigens to obtain antibodies specifically immunoreactive with the protein, and in assays for enzyme agonists or antagonists. The present sequence is a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for enzyme agonists or antagonists. The stress response protein (or fragment).
                                                                                                                                                                                                                                               1; Fig 4; 205pp; English.

Patent No. 6287835
GENERAL INFORMATION:
FAPLICANT: Crotaou, Rodney et al.
TITLE OF INVENTION: Transacylases of the Paclitaxel Biosynthetic Pathway
FILE REFERENCE: 53679
CURRENT APPLICATION NUMBER: US/09/457,046B
CURRENT FILING DATE: 1999-12-07
NUMBER OF SEQ ID NOS: 74
SOFTWARE: Patentin Ver. 2.1

In the TU Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all eight RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Fenton, Malatrasi). Phagemids were placed and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Nature).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and

/note="Vector: pBluescript SK(-); Site 1: EcoRI; Site 2: XhOI; Plants were grown at the University of Minnesota in the GY Muchbauer lab; spikes were harvested and snap frozen at 0, 1, 2, 3, 6, and 8 days after Fusarium graminearum inoculation (Heinen). In the TU Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all eight RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) CDNA phagemids (Choi, Fenton, Malatrasi). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Akkins and Ming). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or environ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          999
